ROCK
Installation planning

Coordinate the kitchen, equipment and services as one project. Utility locations are not universal.

Continuous linear composition. Confirm total length, support and installation access for the selected layout.

1 / Composition and equipment

Confirm the layout, final dimensions, appliance models, sink and tap. Equipment is specified separately unless expressly included in the quotation.

2 / Utilities and ventilation

Provide water, drainage, power and gas positions as required by the equipment. Coordinate cutouts, ventilation, service access and connections with the project and appliance manufacturer’s instructions.

3 / Site and delivery

Check the ground’s load capacity and level, delivery access, transport sections, unloading equipment and maintenance clearance. Confirm support and leveling with Evoluta.

4 / Final approval

Use the approved dimensioned drawing before production and site work. Qualified trades carry out connections; the quotation defines delivery, unloading, assembly and utility work.
